XTREMEM / LAUNCH PACKAGE

Your next project. *Our team by your side.*

120 high-performance modules to build or expand your fleet. The tools to deploy them. Beyond support to take you further.

Already using timber or composite mats? Compare how our XtremeM modules perform in your site conditions. For your projects, rental business or distribution, let's prepare your next deployment together.

An enquiry, not an order. No payment at this stage.

LAUNCH PACKAGE

MADE IN CANADA

Your first *smart fleet.*

Modules for your deployment. A dashboard planned for 2027, followed by the georeferenced Digital Pass in version 2.

120 XtremeM
modules

1,995 USD per module

Package of 120 modules

239,400 USD

Preferential terms reserved for the complete package: modules, accessories and support brought together in one offer.

Freight extra · ex factory

Delivery terms specified in your proposal.

- ✓ Connectors and installation tools
- ✓ Training and technical discussion
- ✓ Follow-up on your XtremeM deployment
- ✓ 6 months of dashboard access included from launch

The modules. The tools. *The team by your side.*

A bundled offer with launch terms for new BST customers, whether you are building your fleet or already own mats. More than a purchase of individual modules: a complete package with connectors, tools, training and Beyond support.

01

120 XtremeM modules

High-performance, reusable access modules to build or expand your fleet for your projects, your customers or your rental business.

02

Connectors and tools

The connectors and installation tools for your package. Your proposal will specify the details based on the configuration selected.

03

Getting-started training

A session with your technical team to prepare for installation, removal, cleaning, inspection and reuse of the modules.

04

Beyond support

A discussion of your site conditions, drainage and environmental considerations, followed by a review of your experience in the field.

3 × 40-foot containers

Planning basis: 40 modules per container. Tell us your country and preferred delivery port, or let's work through these details together.

Loading, accessories, payload and securing arrangements to be confirmed before shipment.

02 / THE BEYOND ADVANTAGE

A fleet of modules. *More possibilities.*

Prepare your site with confidence

Access, drainage, water and regeneration: expertise by your side to address your project's challenges.

Manage your fleet and put usage data to work

The dashboard planned for 2027 will bring together inventory, assignments and usage reports to share with your customers or management team. This will help streamline invoicing, track the use of your assets and inform your management, financial or ESG reporting, based on the data collected.

Help shape future solutions

Your field feedback guides our next innovations. A relationship that continues from one deployment to the next.

FROM ONE SITE TO THE NEXT

A module you can clean. *Reuse you can better manage.*

XtremeM modules can be cleaned to remove soil and debris before moving to another site. As part of your site protocol, this cleaning helps reduce the risk of transferring contaminants between sites.

01 Clean

Remove soil and debris using an appropriate method.

02 Check

Inspect the module and check the next site's requirements.

03 Record

Keep the date, method, person responsible and supporting records in the future Digital Pass.

Cleaning in your Digital Pass ↓

Disinfect if necessary, using a site-appropriate protocol compatible with the modules.

Your fleet today. *Its management tomorrow.*

Your teams' experience informs future developments. Tell us what would help you track, use and redeploy your modules more effectively.

INCLUDED IN THE PACKAGE

Deploy and learn

Modules, connectors, tools, getting-started training and a review of your experience with Beyond.

LAUNCH PLANNED FOR 2027

Your dashboard

Track inventory and each module's assignment to your customers or projects. Share usage reports with your customers or management team to document usage periods, support invoicing and inform your management, financial or ESG reporting, based on the data collected.

6 months of access included

For programme participants, starting when the service launches. Terms beyond that period will be provided before any paid subscription.

VERSION 2 · IN DEVELOPMENT

Beyond Digital Pass

Each module will be georeferenced in its Digital Pass. Its identity, location, uses, cleaning records and inspections will be brought together in one digital passport.

Discover the Digital Pass 

A second version to extend your fleet management capabilities. Launch schedule to be announced.

BEYOND DIGITAL PASS / VISION FOR VERSION 2

Every module has a story.

Keep track of it.

From the first project to the next deployment, the Digital Pass will bring together each module's identity, georeferencing and history, including cleaning and inspection records, to help you manage your assets and prepare for their next use.

A lasting identity

Link each module to its record and your fleet information.

A history that grows

Find recorded assignments, usage periods and maintenance activities.

Every module georeferenced

Version 2 will add each module's georeferenced location to its digital passport.

Better preparation for reuse

Record cleaning and, where needed, disinfection under a validated protocol: date, method, person responsible, photos and inspection.

Concept in development, not currently available. Information will depend on the data recorded and validated. Any environmental indicators will require an appropriate methodology and supporting evidence.

Concept mockup · Illustrative data · Non-interactive

Received at the depot
- 03 Cleaning and inspection**
Cleaning recorded · inspection to be recorded
- 04 Next deployment**
Subject to inspection results

Photos · cleaning · inspections · documents

ACCESS FIRST / NETWORK IN PREPARATION

Put your fleet to work for essential access.

Beyond is preparing a partner network to meet access needs during humanitarian operations and emergency response. An opportunity to put your fleet and expertise to work where they can make a difference.

Beyond offers you the opportunity to join this future network and offer your modules for rental, along with installation or removal services. **Module rentals and paid services:** arrangements, compensation and deployment terms will be negotiated before each operation.

Explore this opportunity →

Network in preparation; participation is optional. You may also choose to make a contribution free of charge, with no obligation to do so.

04 / YOUR FEEDBACK MOVES THE SOLUTION FORWARD

**You use it.
We listen.**
We improve together.

01 Tell us how you will use it

A few photos and a short description of your project, typical sites or rental business. Your customer's name is optional.

02 Share your field experience

In return for the introductory terms, participants commit to providing photos, videos and honest feedback after deployment. What works well, and what could be improved.

03 Contribute to the next innovations

Unmet needs, drainage, installation, management or future smart modules: your challenges guide the discussion.

Publishing a case study, your images or a customer's identity will require separate permission. Participation does not oblige you to publish a positive testimonial.

05 / YOUR INFORMATION, DIRECTLY ACCESSIBLE

Technical data. References. *Everything to move forward.*

Your package presentation includes direct access to the technical overview, delivery references, PDF and demonstration. Explore them now, with no registration or additional request.

06 / YOUR LAUNCH PACKAGE

Your site. Your business. *Our starting point.*

Receive your proposal for the package of 120 high-performance modules, discuss distribution or start with a video call.

Prepare your proposal online: beyonders.tech/en/xtremem/launch-package#demande

BEFORE YOU BEGIN

A few useful answers.

I already use timber or composite mats. Can I participate?

Yes. The programme is for new Beyond Sustainable Tech (BST) customers, whether they are building their fleet or expanding it. Describe the mats you use and the performance you would like to compare: installation, handling, reuse or behaviour in your site conditions.

I run a rental business. Can I participate?

Yes. Describe your typical customers and applications, even if you do not have a specific project in mind. Also tell us who usually handles installation and removal: your team, the customer or a third party.

I would like to become a distributor.

You can tell us about your interest, territory and business model. An enquiry about participation does not automatically grant distributor status or territorial exclusivity; these opportunities are discussed with BST.

My delivery port or project is not yet defined.

Tell us which details you would like to work through together, or request a video call. You do not need all the answers to start the conversation.

How should I prepare modules to move from one site to another?

Plan for cleaning, inspection and traceability before each transfer. Depending on the contaminants and site requirements, disinfection may also be needed: the method and products used must be validated for compatibility with the modules. Removed soil and wash water must be managed to avoid spreading contamination. Cleaning alone does not guarantee the removal of all contaminants. Sterilisation cannot be claimed without a validated, compatible process; a Digital Pass entry is not a sanitary certification.

When will I be able to use the dashboard and Digital Pass?

The dashboard launch is planned for 2027, with inventory, assignments and usage reports to share with your customers or management team, support invoicing and inform your management, financial or ESG reporting, based on the data collected. The six included months will begin when the service launches. The second version will integrate the Digital Pass and georeferencing for each module; its schedule and terms will be communicated separately.

Will I be able to receive alerts about projects in my region?

You can separately express interest in a future service for monitoring project opportunities. Its terms are still to be defined. It is neither a promise of contracts nor a service included and available today.

Who provides my support and invoice?

Beyond Sustainable Tech (BST) prepares your proposal, handles invoicing and coordinates your support. Any specific study or engineering validation needs for your site will have a scope agreed with you.
